

STAAD — Product Requirements Document (Updated)

Firestore SDK Configuration

```
// Import the functions you need from the SDKs you need
import { initializeApp } from "firebase/app";

const firebaseConfig = {
  apiKey: "AIzaSyBwMuFR8DnpTVVqHD7TVjYVh50_e9FNaiE",
  authDomain: "staad-edtech.firebaseio.com",
  databaseURL: "https://staad-edtech.firebaseio.com",
  projectId: "staad-edtech",
  storageBucket: "staad-edtech.firebaseio.com",
  messagingSenderId: "951372940788",
  appId: "1:951372940788:web:51ae0f6cef8e7df7db25a1"
};

const app = initializeApp(firebaseConfig);
```

Firestore Services Used

- Firestore Authentication
- Firestore Database
- Firestore Realtime Database
- Firestore Cloud Messaging

Recommended Firestore Architecture

Firestore → live therapy sessions and module sync

Realtime Database → presence and typing indicators

Authentication → therapist/client login

FCM → push notifications

Production Notes

Use Firebase only where realtime synchronization is needed.

Use Neon PostgreSQL for structured relational data.

Use Cloudflare R2 for file storage.

Use Daily.co for video conferencing.
